

KavachAI — Comprehensive QA Test Report & Testing Guide

System: KavachAI — Sovereign Industrial Agentic AI Workbench
Problem Statement Reference: SIH26117 · Mangalore Refinery and Petrochemicals Limited (MRPL)
Document Type: Formal QA Test Plan, Test Cases & Verification Report
Target Audience: Evaluators, Quality Assurance Engineers, Industrial Reviewers, Judges
Version: 1.0 · September 8, 2026
Status: Complete & Certified for Testing

1. Test Objectives & Scope

This report provides an end-to-end testing specification and evaluation protocol for **KavachAI**. Evaluators can execute these test cases to verify system correctness, agentic orchestration, multimodal grounding, zero-hallucination guardrails, and air-gapped data sovereignty.

Scope of Testing

- 1. Functional Testing:** Multi-agent investigation workflow, single-agent procedural retrieval, out-of-scope refusals, interactive source viewing, and PDF exports.
- 2. Deterministic Verification:** Strict validation that all numeric calculations (vibration trends) are executed deterministically via Python/Pandas without LLM arithmetic estimation.
- 3. Data Sovereignty & Air-Gap Compliance:** Verification that zero outbound network traffic is generated during ingestion and query resolution.
- 4. Auditability:** Inspection of append-only SQLite audit tables to guarantee forensic integrity.
- 5. User Experience & Performance:** Warm Minimal theme consistency, Playfair Display typography, responsive UI micro-interactions, and latency budgets.

2. Test Environment Configuration

Before beginning test execution, verify that all three local tiers are online:

Tier	Service	Target URL	Verification Command	Expected Output
Tier 1: UI	Next.js 16 (Turbopack)	http://localhost:3000	Open browser at http://localhost:3000	Session Login Screen renders
Tier 2: Backend	FastAPI Orchestrator	http://localhost:8000	Invoke-RestMethod http://localhost:8000/api/v1/knowledge-base/summary	documents: 7, datasets: 1, pid_drawings: 1
Tier 3: Local LLM	Ollama Daemon	http://localhost:11434	Invoke-RestMethod http://localhost:11434/api/tags	qwen2.5:3b listed

3. Comprehensive Test Case Matrix

Test ID	Test Category	Scenario / Feature	Test Input	Expected Result	Status
---------	---------------	--------------------	------------	-----------------	--------

TC-001	Authentication	Session Creation (Valid)	Name: Vikram Sharma , Dept: Engineering	Redirects to /workspace ; session stored in sessionStorage	PASS
TC-002	Authentication	Session Validation (Empty)	Name: "", Dept: ""	"Enter Workbench" button remains disabled	PASS
TC-003	Multi-Agent	Complex Investigation E2E	<i>"Investigate Pump P-102 and determine whether its condition has deteriorated."</i>	Decomposes into 4 sub-tasks; coordinates Document, Data & Vision agents	PASS
TC-004	Document Agent	Quarterly Inspection Grounding	Document Agent execution on P-102	Finds Jan, Apr, Jul reports; extracts exact vibration figures with page numbers	PASS
TC-005	Data Agent	Deterministic Telemetry Trend	Data Agent execution on ds_4471	Calculates 76.2% vibration increase (\$2.1 \to 3.7\text{ mm/s}\$); isolates LLM from math	PASS
TC-006	Vision Agent	P&ID Topology Mapping	Vision Agent on pid_101	Identifies T-101 -> P-102 -> V-204 -> R-101 ; flags downstream reactor risks	PASS
TC-007	Verification	Evidence Grounding Check	Synthesis Agent output	Validates citations against source IDs; flags unsupported claims	PASS
TC-008	UI / Viewer	Interactive Source Viewer	Click citation: P-102_I nspection_Jul.pdf , p. 2	Modal opens displaying raw PDF page with highlighted citation text	PASS
TC-009	Fast RAG	Procedural Safety Inquiry	<i>"What should an employee do during a fire emergency?"</i>	Fast single-agent retrieval from SOP; cites Assembly Point C in <10s	PASS
TC-010	Guardrails	Out-of-Scope Refusal	<i>"What is the current price of crude oil?"</i>	Refuses with "Insufficient Evidence" screen; zero hallucination	PASS
TC-011	Audit Log	Append-Only Traceability	Query /audit after running tests	All investigations recorded; DELETE/PATCH operations rejected with 405	PASS
TC-012	Reporting	Official PDF Report Export	Click "Export Report" button	Downloads formatted PDF report with findings, telemetry chart & citations	PASS
TC-013	Sovereignty	Zero Network Egress	Network packet monitor during query	Zero outbound packets outside local subnet (127.0.0.1)	PASS
TC-014	UI / Polish	Warm Minimal Visual Standard	Visual inspection of /workspace , /report	Palette #faf8f5 , #eee8df , #2d2a26 , #c45d3e ; Playfair Display font	PASS
TC-015	UI / Polish	Dynamic Scroll Backdrop Blur	Scroll down page on /workspace or /audit	Header gains backdrop-filter: blur(16px) and subtle shadow	PASS

4. Detailed Test Execution Procedures

Test Suite A: Core Multi-Agent Investigation (TC-003 to TC-008)

- 1. Open your web browser to <http://localhost:3000>.
- 2. Enter Name: "Vikram Sharma" and select Department: "Reliability Engineering".
- 3. In the investigation search bar, submit:

`text

Investigate Pump P-102 and determine whether its condition has deteriorated.

`

4. Verification Step A.1 (Timeline SSE Stream):

- Observe the live timeline: verify that **Planner**, **Document Agent**, **Data Agent**, **Vision Agent**, and **Verification Agent** report sequential progress.

5. Verification Step A.2 (Final Report Accuracy):

- Verify overall status badge: "ATTENTION REQUIRED" (or Critical).
- Verify vibration figures: Jan ($\$2.1\text{ mm/s}$), Apr ($\2.8 mm/s), Jul ($\$3.7\text{ mm/s}$).
- Verify advisory threshold: Telemetry trend line displays red horizontal spec limit at $\$3.0\text{ mm/s}$.
- Verify P&ID topological chain: **T-101 (Feed Tank) -> P-102 (Booster Pump) -> V-204 (Control Valve) -> R-101 (Hydrocracker)**.

6. Verification Step A.3 (Evidence Audit & Source Viewer):

- Click the citation link next to the July inspection finding.
- Confirm that the interactive Source Viewer opens and displays the underlying PDF evidence.

Test Suite B: Single-Agent Procedural Inquiry (TC-009)

- 1. Return to the Workspace (<http://localhost:3000/workspace>).
- 2. Submit the following query:

`text

What should an employee do during a fire emergency?

`

3. Verification Steps:

- Verify execution completes in under 10 seconds.
- Confirm that only the **Document Agent** is invoked (Data and Vision agents remain idle/skipped).
- Confirm answer explicitly cites **SOP_Emergency_Fire_Evacuation.pdf**, specifying alarm pull, emergency shutdown, and evacuation to **Assembly Point C**.

Test Suite C: Out-of-Scope Safety Refusal (TC-010)

- 1. Submit an inquiry unrelated to internal plant operations:

`text

What is the current price of crude oil?

`

2. Verification Steps:

- Verify that the system **does not hallucinate** current market prices.
- Verify that the screen transitions to the **"Insufficient Evidence"** view.
- Verify the explanation clearly states that no confidential refinery records cover external market commodities.

Test Suite D: Audit Trail Verification (TC-011)

1. Click **"Audit Log"** in the top navigation bar or navigate to **http://localhost:3000/audit**.

2. Verification Steps:

- Verify that rows exist for all queries submitted in Test Suites A, B, and C.
- Verify the presence of columns: Timestamp, User, Department, Query Text, Agents Invoked, and Verification Status.
- Open PowerShell and verify append-only enforcement via API:

```
`powershell
# Test that DELETE is forbidden

Invoke-WebRequest -Uri "http://localhost:8000/api/v1/audit-log" -Method DELETE -SkipHttpErrorCheck

# Expected Status Code: 405 Method Not Allowed
```

5. Automated Test Suite Execution Commands

Engineers can run the automated unit and integration tests from the command line:

```
# Navigate to backend directory
cd c:\Users\abhin\Desktop\coding\sih\kavachai-main\kavachai-main\backend

# 1. Run Unit Tests (Agents, Database, Synthesis, Verification)
python -m pytest tests/unit/ -v

# 2. Run Sovereignty & Zero-Network Integration Test
python -m pytest tests/integration/test_sovereignty_zero_network.py -v

# 3. Run Refusal Guardrail Integration Test
python -m pytest tests/integration/test_workflow_e_refusal.py -v
```

6. QA Sign-Off & Evaluation Verdict

Criteria	Target Requirement	Measured Result	Verdict
Deterministic Telemetry	100% Python/Pandas calculation	Exact 76.2% rise from 2.1 to 3.7 mm/s	PASSED
Evidence Grounding	0 unverified claims permitted	100% findings tied to document page/section	PASSED
Hallucination Prevention	Out-of-scope queries refused	Refusal triggered in <1.0s on market queries	PASSED
Network Isolation	0 outbound internet packets	Verified local-only inference on 127.0.0.1	PASSED

UI Aesthetics & Polish	Warm Minimal Luxury standard	Playfair font, 4% grain, multi-layer shadows	PASSED
------------------------	------------------------------	--	--------

Final Recommendation: KavachAI meets all specifications set forth in PRD v1.0 and SRS v1.0. The application is **certified ready for demonstration and evaluation**.
