

HEAVY-DUTY CENTRIFUGAL PUMP HCP-200 OPERATING MANUAL (P-102)

Section 1.0 Design & Specifications

Model: HCP-200 Heavy Duty Centrifugal Pump

Design Service: Unit 101 Crude Charge P-102

Rated Flow: 450 m³/h | Rated Head: 160 m

Section 4.0 Operating Limits and Standards

Safe continuous operating limits for Model HCP-200.

Section 4.2 Vibration and Temperature Limits

Operating threshold for this pump model:

- Continuous acceptable vibration velocity (RMS): below 2.8 mm/s.
- The attention threshold for continuous operation of Pump P-102 is 3.0 mm/s. When vibration velocity exceeds 3.0 mm/s, an immediate engineering inspection and spectrum analysis must be initiated.
- Emergency trip threshold: 4.5 mm/s.
- Maximum allowable bearing operating temperature: 85°C; advisory threshold: 75°C.
