

PROCESS FLOW SPECIFICATION: UNIT 101 CRUDE CHARGE TRAIN

1.0 Train Overview

Unit 101 handles primary crude feedstock desulfurization and charging.

2.0 Interconnection Topology

Equipment connections in Unit 101:

- Feed Tank T-101 buffers incoming crude storage.
- Feed Tank T-101 feeds into Centrifugal Pump P-102.
- Pump P-102 discharges pressurized crude to downstream Control Valve V-204.
- Control Valve V-204 feeds into Desulfurization Reactor R-101.

Process flow connectivity chain: T-101 -> P-102 -> V-204 -> R-101.
